

AngularJS How to develop an SPA

1. Create page with Navigator bar (ng-navigator)
2. Create the ng-View div
3. When click a button on navigator bar, route to a templateUrl (?). Route will be responsible for setting the controller.

```
userApp.config(function($routeProvider) {  
  $routeProvider.when('/users/new', {  
    controller : 'NewUserCtrl',  
    templateUrl : 'views/newuser.html'  
  }).when('/users/:userId', {  
    controller : 'UsersByIdCtrl',  
    templateUrl : 'views/userbyid.html'  
  }).when('/users', {  
    controller : 'UsersCtrl',  
    templateUrl : 'views/users.html'  
  }).otherwise({  
    controller : 'SpaCtrl',  
    templateUrl: 'views/spahome.html'  
  });  
});
```

4. In the template html, set the content to display
